Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

A bank generates secure codes using 3-digit numbers where each digit is unique, and the code must be divisible by 3. You are tasked with generating the first N such codes based on user input, ensuring the digits are unique and the number is divisible by 3.

Note: Use nested for loops to solve.

Input Format

The first line contains an integer N representing the number of valid codes to generate.

Output Format

The output prints N lines, each line contains a valid 3-digit code.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

Output: 102

105

108

120

123

Answer

```
import java.util.Scanner;
class SecureCodes {
    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int n = s.nextInt();
        int c = 0;
        for (int i = 100; i <= 999; i++) {
            int a = i / 100;
            int b = (i / 10) % 10;
            int d = i % 10;
            if (a != b && a != d && b != d && i % 3 == 0) {
                System.out.println(i);
                c++;
                if (c == n) {
                    break;
                }
            }
        }
    }
}
```

Status : Correct

Marks : 10/10
